```

CPM : Critical Path Method
PERT : Program Evaluation Review Technique

VI - 2

PERT (PROGRAM EVALUATION REVIEW TECHNIQUE)

- **Perbedaan durasi deterministik & Probabilistik**
 - Deterministik : 1 type durasi (d)
 - Probabilistik : 3 type durasi (a, m, b)
- **Sumber perkiraan durasi**
 - Historical Information (pengalaman proyek yang lalu)
 - Observasi / pengamatan
 - Expert Judgement
- **Kemungkinan bentuk distribusi waktu**
 - Distribusi beta , Distribusi Triangular
 - Distribusi Normal , Distribusi Uniform
 - Dan sebagainya.

VI - 3

BENTUK DISTRIBUSI DURASI

Uniform distribution
Probability density is constant between minimum and maximum. Any price within this range is equally likely to occur.

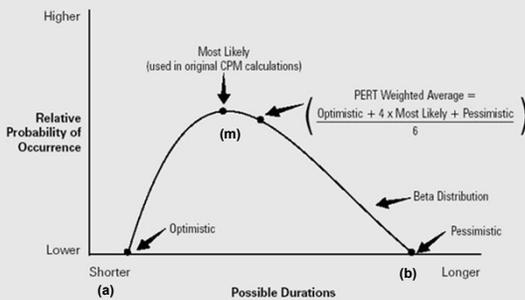

Triangular distribution
Probability density is highest at the most likely value (mode) and lowest at the minimum and maximum values. The size of the area is the chance that the price will fall between the minimum and the most likely.

Normal distribution
Probability density is highest at the mean. It shows curves for small, large, and very large standard deviations.

VI - 4

BETA PERT DISTRIBUTION

Figure 6-4. PERT Duration Calculation

VI - 5

Act	Pred	Duration			Mean Te	Std Dev Sd	Variance
		Opt	M Likely	Pessimistic			
A	-	2	3	7	3.5	0.83	0.69
B	A	3	4	8	4.5	0.83	0.69
C	A	5	6	10	6.5	0.83	0.69
D	B, C	3	4	5	4	0.33	0.11
E	C	2	3	7	3.5	0.83	0.69
F	D, E	6	8	10	8	0.67	0.44

Formulasi Konversi beta PERT

$$te = \frac{(a + 4m + b)}{6}$$

$$S_d = \frac{(b - a)}{6}$$

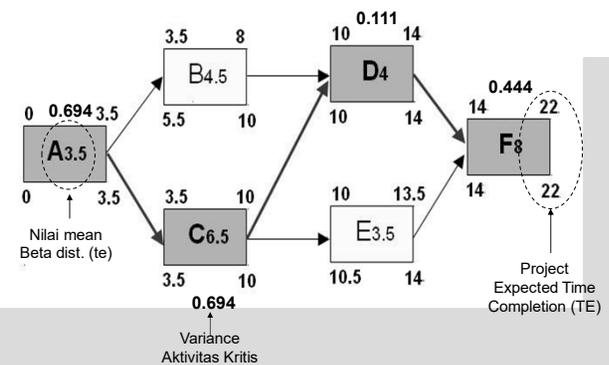

$$Var = \left[\frac{(b - a)}{6} \right]^2 = \frac{(b - a)^2}{36}$$

Masukkan nilai mean Beta dist. (te) Sebagai pengganti (d) pada Network scheduling (CPM)

a = Optimistic duration
m = Most likely duration
b = Pessimistic duration

VI - 6

CPM NETWORK SCHEDULING

VI - 7

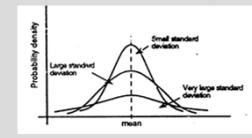

VARIASI PENYELESAIAN PROYEK

$$\text{Var LK} = \text{Var A} + \text{var C} + \text{Var D} + \text{Var F}$$

$$= 0.694 + 0.694 + 0.111 + 0.444$$

$$= 1.944$$

$$\text{SD LK} = \sqrt{\text{Var LK}} = \sqrt{1.944} = 1.394$$

Bila ada lebih dari 1 lintasan kritis (LK), maka diambil lintasan yang memiliki Variance terbesar. (Risk Lover Style)

VI - 8

PROBABILITAS PENYELESAIAN PROYEK

$$Z = \frac{Td-TE}{Sd LK}$$
 Dimana :
 Z = Nilai pada Tabel Normal Distribusi
 Td = Target durasi
 TE = Project Expected Time Completion
 Sd LK = Standard Deviasi Lintasan Kritis

Misal Target penyelesaian 23 hari :

$$Z = \frac{Td-TE}{Sd LK} = \frac{23-22}{1.394} = 0.717$$

$$P(z = 0.717) = 76.327\%$$

VI - 9

VI - 13

PENYELESAIAN

PENYELESAIAN

Jalur kritis D, F, H, I

$$\text{Var lintasan kritis} = 11.111 + 4.694 + 11.111 + 2.25 = 29.166$$

$$\text{SD} = (29.166)^{0.5} = 5.4$$

Target 90%, z = 1.28

$$Z = \frac{td - te}{SD}$$

$$1.28 = \frac{td - 117}{5.4}$$

$$Td = 123.912$$

= 124 satuan waktu

VI - 15

LATIHAN

Suatu proyek mempunyai aktivitas-aktivitas yang tertera pada tabel dibawah ini. Anda sebagai seorang engineer ditugas untuk membuat network.

Aktivitas	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
Predecessors	-	A	A	-	B	C,D	C,D	D	H	F	E,J	F	G,I	G,I	L,N
Durasi (hari)	6	7	1	14	5	8	9	3	5	3	4	12	6	2	7

Pertanyaan:

Tentukan expected time project completion, jika durasi yang tercantum pada tabel diatas dianggap sebagai most likely, dan optimistic duration 2 hari lebih awal dari most likely, serta pessimistic duration 3 hari lebih lambat dari most likely. Tentukanlah juga berapa total penyelesaian proyek tersebut dengan tingkat kepercayaan 90%.

VI - 16
